Vacancy details

Requirements:

- Active participation in the application architecture definition.

- Ensure development best practice respect in day-to-day activities.

- Evolve the technical eco-system by proposing solutions and appropriate tools.

- Develop the key software functionalities.

- Propose long-term solutions to allow the company to assume growth ambitions.

- Ensure quality development to answer the business needs and customer data security.

Who we are looking for:

- IT Software engineer

- You have at least 5 years of experience in PHP development using Symfony framework.

- Docker containers have no secrets.

- You look forward developing REST API but also external systems connectors to synchronize critical data.

- You have always pushed for automated tests implementation and continuous integration because you are

absolutely convinced about their usage.

- You have good knowledge about MySQL database or equivalent.

- You are aware of UX aspects and you always keep in mind user needs.

- An experience with REACT javascript framework would be appreciated.

- You are rigorous and you like well-done job; you are proud of your work and projects.

- You are a team player but able to work independently when needed.

- You have an analytic mindset and you are always solution oriented.

- You speak and write English well enough to lead a meeting and write public documentation.
